SERVICE BULLETIN

In case it is necessary to replace code 811730142 (CF) OLD, it is possible to mount a commutator code 811730221 (CF) NEW taking out the copper jumper (PR), carrying out an easy operation, as shown in the following picture (A).

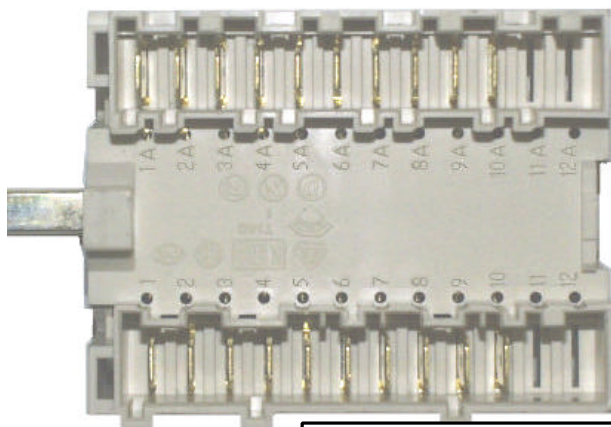

Change from NEW TF = 811730221 (B&S) in OLD TF = 811730142

From the 21st week of 2002, on the 70cm built-in ovens and from the 24th week on the 90cm ovens (see table on page 3), the code 811730221 NEW (CF) will be purchased from supplier E.G.O., instead of BERNHARDT & SCHULTE KG (B&S), maintaining the same connection type.

NB: in case of substitution, in service, you must keep present that the numeration 1-2-3-4-5-6-7-8-9-10 of a supplier corresponds to 1a-2a-3a-4a-5a-6a-7a-8a-9a-10a from the other and vice versa; for example, a wire on contact 1 of the OLD B&S commutator must be inserted on contact 1a of the E.G.O. commutator.

NEW

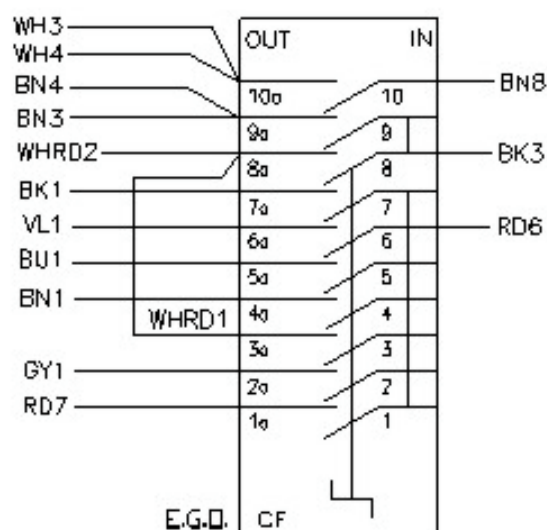

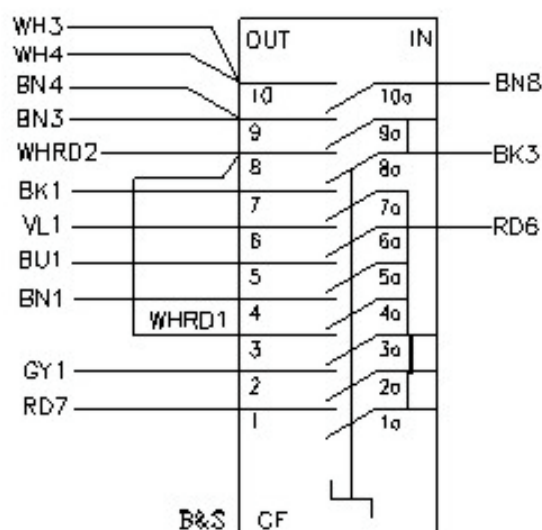

CF = 811730221 (E.G.O.)

NB: the NEW (TF) commutator code 811730221 E.G.O can not replace the OLD TF black commutator code 811730142, supplied by BERNHARDT & SCHULTE KG (B&S).
